DESCRIPTIVE PRICE LIST ON CARDINAL AND CRYSTAL GRAPEVINES:

CARDINAL - The new, early, red market variety; a cross between Tokay and Ribier. The Cardinal was developed by the United States Department of Agriculture, Bureau of Plant Industry, at Fresno, California. It has commanded outstandingly high prices at leading markets in the country and for export in its first three years of commercial production, 1947, 1948 and 1949. Its most outstanding quality is its earliness, ripening from two to three weeks ahead of Thompson Seedless in the Central Valleys. The vines are medium sized and develop the fruit on spurs or short canes, frequently developing several clusters of berries on each growing shoot. The berries are dark red, large and firm; they develop on large, compact, not heavily shouldered clusters and have excellent eating qualities; crisp and juicy with a slight muscat flavor. Cardinal has been successfully grown in most grape regions of the San Joaquin Valley, in the Imperial Valley and in the Phoenix area of Arizona. Its earliness and good shipping and eating qualities destine it to become one of the important commercial marketing varieties in the state.

CRYSTAL - The very newest white table grape, developed in Tulare County by crossing five different varieties of white grapes, including Thompson Seedless, Malaga and Almeria. Medium to large oval berries, greenish white, becoming golden when fully ripe and with a transparent appearance. Crisp and crackling with a sweet and very pleasing flavor. Has ripened as early as July 10th in Tulare County and always at least one week ahead of Thompson Seedless. Vine a very strong grower and heavy bearer. Fruit keeps well on or off the vine and because of its excellent keeping qualities is fine for storing and long distance shipping. First fruited in commercial quantities in summer of 1947 and most of the limited production so far has been exported as far away as Manila at excellent prices. On domestic markets always tops Thompsons by at least \$1.00 per lug. Demand far exceeds the limited supply, making this a very profitable variety for planting.

Grade	Each	Per 10	Per 100	Per 1000
JUMBO No. 1 (18 to 30 in. tops extra heavy rooted)	.75	.60	.40	.30
No. 1 (10 in. and up tops well rooted)	.60	.40	.25	.20
No. 2 (5 to 10 in. tops growable roots)	.40	.25	.15	.10
18 in. Mature wood cuttings	.20	.15	.08	.07
